

## IMPORTANT INFORMATION

### Genie S WIRING

The following information is considered important but not a safety issue.

It has been discovered that some Genie S Pool Heaters have been wired incorrectly and two thermostats have been reversed. This covers the serial number range from 08960 to 099447.

In the normal operation of the appliance neither of these two thermostats will be operating and so it is very possible that the unit will run completely normally. If however the appliance is exhibiting a number of 'GAS' alarms on its display, that can be reset by the panel reset button alone, this will be the cause.

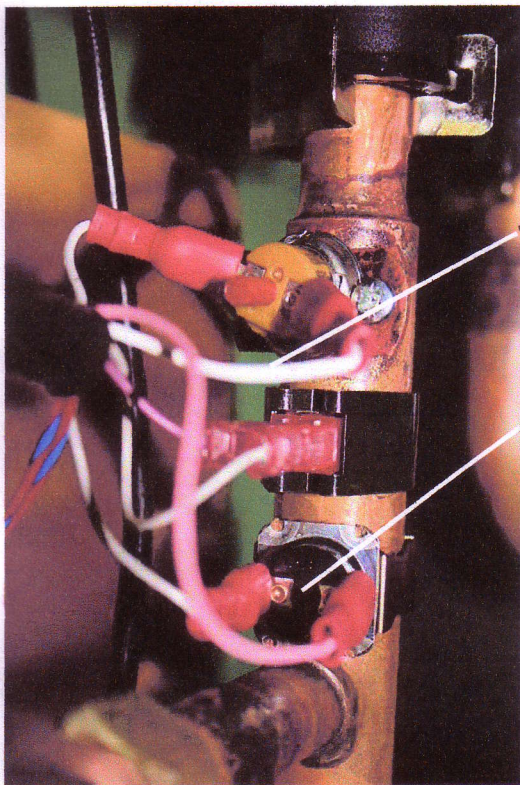

The Manufacturer recommends that the wiring is checked and where necessary corrected for all Genie S models in the above serial number range, when you have competent engineer on site.

The correction is the reversing of the two pairs of wires as per the photos below.

We will not be contacting you again regarding this fault as it is not considered to be a safety issue.
